Douglas College
CSIS 4495 – Fall 2025

Date	Task Completed	Hours Spent
4- Sept-2025	Created Group with Dilpreet. Choose two projects of Riipen and decided to go with Weather Driver App as I wanted to create mobile app in react native.	2 Hours
7-Sept-2025	Explored the existing apps similar to weather driver app i.e. Drive Weather	1 Hour
13-Sept-2025	Had zoom meeting with Juliet and discussed about the projects. She offered two projects: 1.Customer Service Portal web app 2. Security Early Detection mobile app And then I researched on project. Discussed with Dilpreet about the projects and conclude to withdraw the request for ripen projects as the first project was out of scope for us as we want to create an app and first one was web app and second for large and complex for 2 members to complete within time limit. And decided to create our own app.	2.5 Hour
14-Sept-2025	Researched and brainstormed potential project ideas and discussed with Dilpreet and decided to go with his idea of CERA . Informed Juliet and Professor regarding the project withdraw. Started documentation Wrote Overview, methodology and data collection.	3 Hours

15-Sept-2025	Wrote Scope of work and create project agreement	1.5 Hours
18-Sept-2025	Did changes in project proposal as per the feedback of professor.	2 Hours
19-Sept-2025	Accept the collaboration request send by Dilpreet, review everything he setup on github and on kanban board. Had a meeting with Dilpreet to discuss about the project setup and review and discuss the data model file created by Dilpreet. Started UI designing on Figma.	2.5Hours
20-Sept-2025	Continue with Ui Designing, Draw a rough sketch again for screens Did some changes in existing screens	2.5 Hours
24-Sept-2025	Create new screens and did changes in existing ones.	2.5 Hours

DESCRIPTION OF WORK DONE:

Week 1 (Sept 4–Sept 7, 2025)

This week, I focused on forming the project group and exploring project options. On September 4, I created a group with Dilpreet and reviewed two Riipen projects, deciding to go with the Weather Driver App because I wanted to develop a mobile app using React Native. On September 7, I explored existing apps similar to the Weather Driver app, such as Drive Weather, to understand their features and functionality.

Week 2 (Sept 13–Sept 15, 2025)

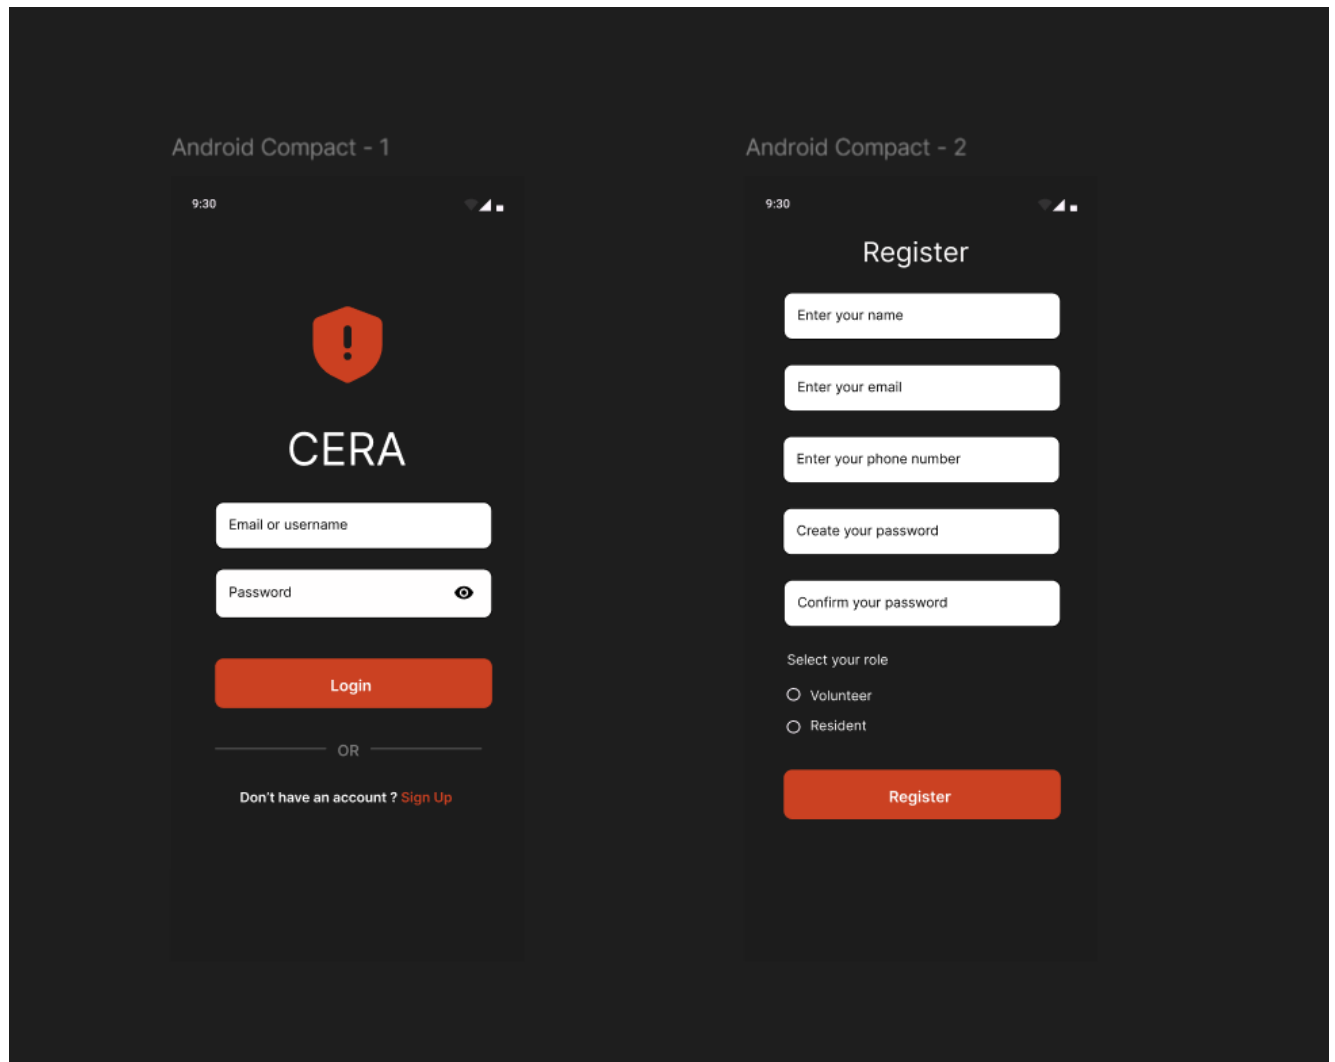

This week, I focused on finalizing the project direction and starting documentation. On September 13, I had a Zoom meeting with Juliet to discuss the suggested projects, including Customer Service Portal and Security Early Detection apps. After researching the projects and discussing with Dilpreet, we concluded that both Riipen projects were not suitable due to scope and complexity. We decided to create our own app instead. On September 14, I researched and brainstormed potential ideas, and we finalized the Community Emergency Response App (CERA). I informed Juliet and the professor about withdrawing the Riipen projects and started the documentation, writing the overview, methodology, and data collection sections. On September 15, I wrote the scope of work and created the project agreement.

Week 3 (Sept 18–Sept 24, 2025)

This week, I made changes to the project proposal based on the professor's feedback. On September 19, I accepted the GitHub collaboration request from Dilpreet, reviewed everything he set up on GitHub and the Kanban board, and had a meeting with him to go over the project setup and the data model he created. I also started working on the UI design in Figma. On September 20, I continued designing, made rough sketches for the screens again, and updated some of the existing ones. On September 24, I created new screens and made more changes to improve the existing ones.

Repo Check-in of Implementation Completed

I checked in the updated project proposal and added the Figma design link in the README for easy access and review.

Community Emergency Response App (CERA)
